Micron-Master™

Complete Hand-Held Assembly \$159.50 ea.

Four Nozzle Manifold (nozzles, tubing and manifold) \$486.50

To Order: 1-800-548-2223

Description:

- Hand-held pesticide micron-size particle generator (5-10 microns)
- Brass nozzle which applies pesticides via "Venturi" action, which is the uptake and dispersion of a liquid through an orifice by passing high volume air flow around the nozzle orifice
- Pesticide particle size generated by the Micron-Master™ nozzles are ultra fine which aids in the efficacy and movement of the pesticides at application sites
- Air flow through the nozzles are generated by air compressors, compressed or liquid Carbon dioxide bottles, or other means to create a minimum of 40 psi
- Chemical bottles are attached directly to the Micron-Master™ nozzles for chemical uptake

Use:

- ULV pesticide applications (fogging) within residential structures, commercial, institutional, food processing plants, greenhouses and many other structures
- May be used for depositing residual (long-lasting) pesticides on various types of surfaces for a "dry" and thorough application
- Micron-Master™ nozzles may be mounted on manifolds for large-scale applications. Each nozzle applies 0.5 oz. per minute @ 50 psi
