

Pesticide Application Notification

Company:
Manager (or responsible person):
Property address:

Date of application:
Time of application:
End of application:
Property or area on property to be treated*:

Name of pesticide: ProFume®
Active ingredient: Sulfuryl fluoride

Precautions related to protection of employees or other persons during the application:

ProFume® is an acute inhalation toxicant. Areas under fumigation, or where fumigant concentrations are suspect and unknown, must not be entered without a self-contained breathing apparatus (SCBA). Monitor all areas where employees may be exposed to ProFume® using a monitoring device specific for ProFume®, such as the Interscan®, or Spectros ExplorIR®. If fumigant concentrations are above 1 ppm, vacate those areas immediately. If areas are suspected to contain harmful levels, check those areas with gas detection equipment.

Buffer zones have been established to protect employees or bystanders around ProFume® fumigations. Make sure these buffer zones are observed, and keep all employees out of these areas. Limited transit through these areas are allowed if kept to no more than 30 minutes cumulative in a 24 hour period.

Refer to the Fumigation Management Plan associated with this application for further information.

*The operator of the property shall assure that notice is given to all persons who are on the property to be treated, or who may enter during the application or the period of time that any restrictions on entry are in effect, except for the persons who made or supervised the application for which the notice is intended. The notice must be in a manner the person can understand.
