

# INTRODUCING CLIRcheck™

## A NEW INFRARED CLEARANCE MONITOR

The CLIRcheck™ monitor utilizes infrared technology to achieve the high level of accuracy required when measuring sulfuryl fluoride (Vikane™/ProFume™) concentrations for clearance and safe re-entry.

The CLIRcheck™ features a quick warm-up time of about 12 minutes with a digital LCD readout and battery status indicator. Its design features continuous monitoring without the need to stop and fill an internal bag and a “Standby Mode” to conserve battery power between measurements.

It is equipped with an integrated rechargeable battery and optional unlimited operation with AC/DC power. The monitor has a Solid Aluminum Housing with a compact design and includes a carrying bag and a protective case.

**Warranty service, calibration, and repairs are available on both the West and East coasts for faster service.**
